EXPERIENCE

codsoft

web delopment Intern

- worked on creating a websites and adding interactive animations
- learned how website works in the back end and how to connect components with each other

PROJECTS

AI - Synthetic data generation using gan

we use genrative adversal network (Gan) for genration of synthetic data which is almost behaves same as real world data

HAD-Drift-Detection-System

This project implements a Hybrid Drift Detection System (HAD-Drift) that detects data drift in streaming data using a combination of:

- Autoencoder (Deep Learning)
- KL Divergence (Statistical Method)
- PSI Population Stability Index

The goal is to improve robustness and accuracy compared to single-method drift detection techniques.

AI Smart Surveillance System

- An AI-powered surveillance system that detects objects in video streams, triggers alerts, and visualizes results in a dashboard-style interface.

EDUCATION

SRM INSTITUTE OF SCIENCE AND TECHNOLOGY

SEP - 2021 – JUNE 2025

Bachelor of Technology (information technology)

Coursework: Data Structures, Algorithms, Databases, Computer Systems, Machine Learning

SKILLS

Languages : Python, JavaScript (React.js), HTML/CSS, SQL (PostgreSQL, MySQL),
